HOW CAN YOU HELP MAKE YOUR BACKYARD MORE FRIENDLY TO LOCAL WILDLIFE?

If you want to help local wildlife, it is important to view your backyard from a perspective that considered the needs of wildlife.

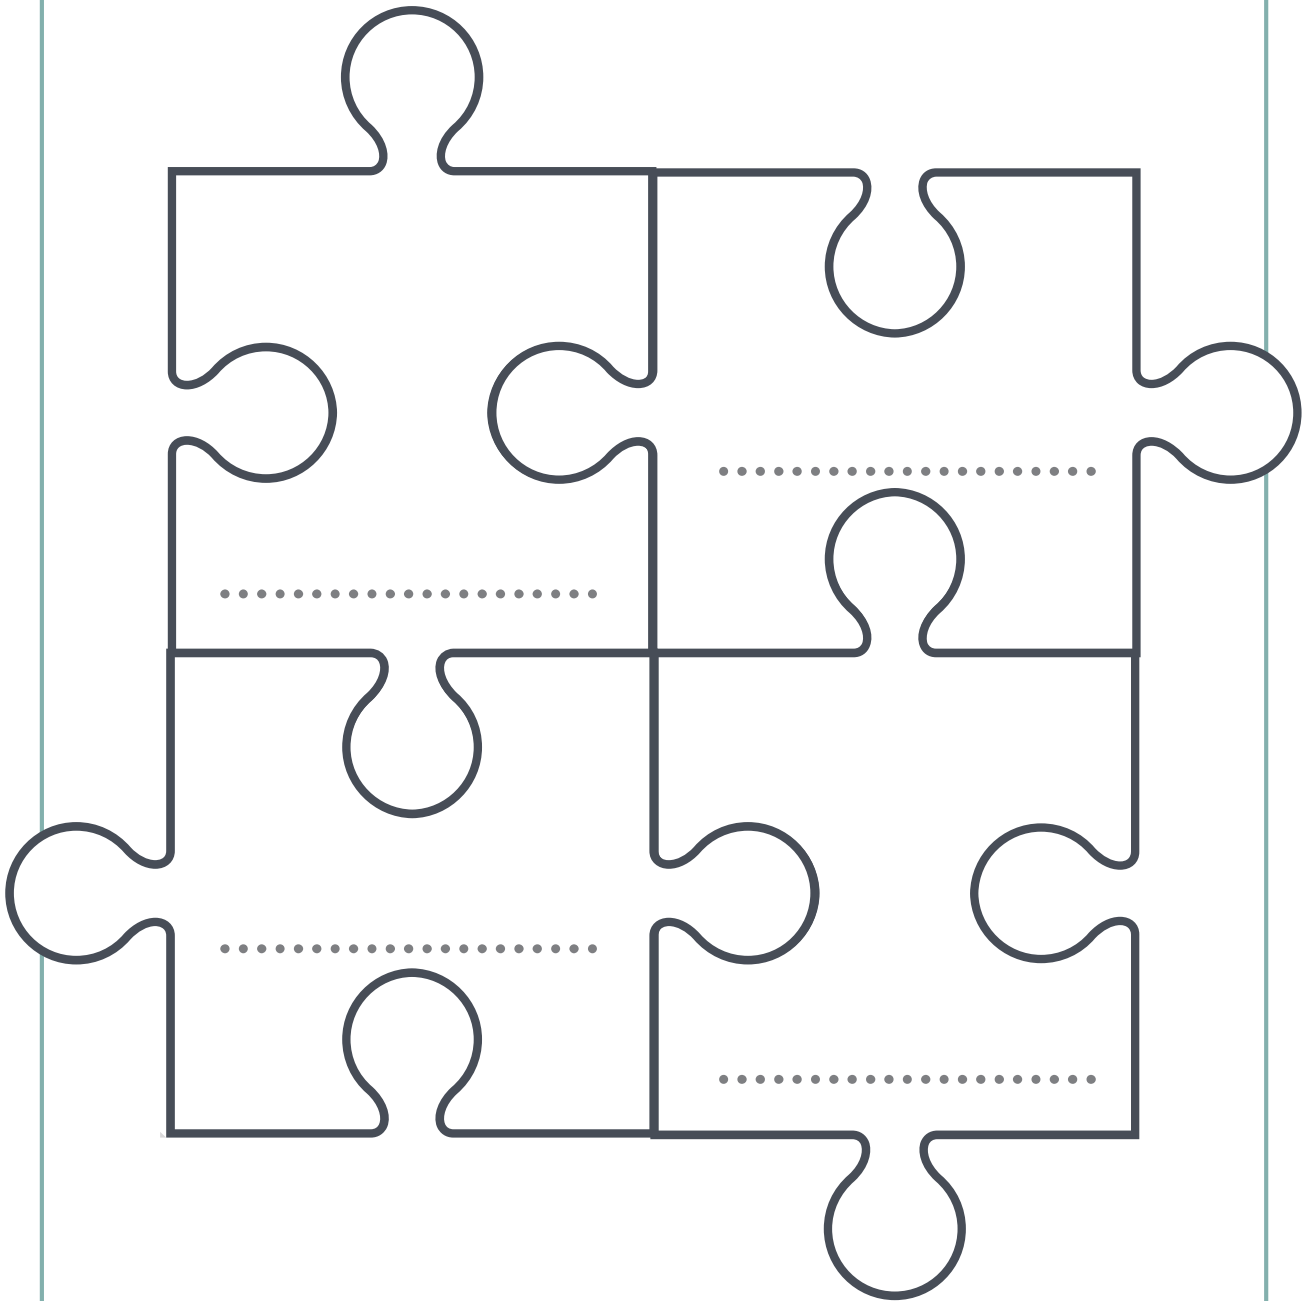

To meet these needs of all animals, we need to provide plants (both aquatic and terrestrial) that produce a variety of foods, such as berries, fruits, nuts, acorns, and grasses. Remember: plants also attract insects, which appeal to birds and other creatures. Each animal has different requirements that each habitat must provide for them.

What is a habitat?

Can you list 3 different types of habitat in your neighborhood?

What are the 4 components of any habitat?

Answers: food, water, shelter, space
